

End Effectors

End Effectors Rapid Prototyping Service

Our **Carbon Fiber end effectors** are available for a large number of applications and as replacement parts for many equipment.

If you have **special needs** or your equipment is not in our standard production, we can give you the opportunity to test a **Carbon Fiber end effector** in the simplest possible way.

Simply send us an **actual size drawing**, a drawing **file**, or a **sample** (even a broken part is enough) and you will receive at the same price than a standard production part our end effector, usually in **less than one week** . If this is not enough, contact us and, in special cases, we can agree a special way to serve you before this limit.

We can manufacture end effectors for new machines and we can also give you our **specialized technical support** to integrate at best the end effector and the rest of the mechanisms.
